

7950 UHF CALL KIT

The 7950 UHF CALL KIT is a simple low cost solution for facilities who don't have a nurse call solution.

While a resident can press the call point when in need of assistance, the pager will receive a Pre-programmed alert.

Multiple call points and pendants can be used as well as multiple pagers.

The call point is a battery- operated device, which has a transmission range of up to 200 metres (direct line of sight). Buildings and structure density may decrease the range however range extenders are available separately.

The pager is a four- line pager with ring alert and vibrate alert.

The pager also comes complete with a hard case with belt clip.
