

Hospital in the Home

The 'Hospital in the Home' range of quality products is for people caring for someone within the home. Having range of up to 100 meters allows a carer to move about the house and garden comfortably, knowing the user can call for help at any time. Monitoring potential at risk activities such as 'out of bed' or 'out of chair' and 'door exit' via the carer's professional pager, will reduce stress and aid in the provision of a higher state of care.

Being economical and easy to set up makes the 'Hospital in the Home' range of devices the 'go to' products for any home care solution. Available in kits and add extra parts if required or build your own kit.
